

RODENT BAIT STATION

A robust light weight bait station designed for indoor and outdoor placement to secure RatAbate® and other rodent baits for the control of rats and mice. Used by professional animal controllers, farmers and food processing plant staff to secure rodent baits in a safe way.

Features

- Protects bait from the weather, prevents non targets from eating baits, and prevents rodents from translocating baits.
- It locks so child and pet safe when closed and unlocks with a specially designed key.
- Constructed from impact resistant and injection moulded plastic for longevity in the field.
- Rats and Mice can feed inside the bait station without the fear of being discovered.
- The roomy station size allows multiple feedings by rats at the same time bringing populations under control quickly.
- Dual aligned 60-70mm entrance/exit ways makes rat feel safe, as they like to be able to see an escape route.
- Stations dimensions: 250mm length x 190mm width x 95mm height.
- Half of the internal area is divided by a 20mm high wall so approx. 150g to 200g of RatAbate® Paste bait can easily be contained inside. And, 2 x 40mm spikes allow baits with hole through the centre or soft baits to be skewered hence affixed securely in place.
- Designed to sit against a wall to take advantage of the typical hunting characteristics of the rat.
- Highly suitable for rural situations where high rodent numbers can prevail and a lot of bait is needed to be placed in a safe manner.
- Clear concise warning signage moulded into the plastic on each station reads – DANGER POISON INSIDE DO NOT TOUCH RODENT BAIT STATION KEEP AWAY FROM CHILDREN AND PETS.
