

## AHD ENERGY DRENCH FOR SHEEP

EWES WITH SUSPECTED TOXEMIA (SLEEPY SICKNESS) OR HYPOCALCAEMIA (MILK FEVER)

AHD Energy Drench will provide a ewe with several sources of propionate via the Calcium propionate with the magnesium, the Molasses, Mono Propylene Glycol and slow releasing Soya Bean Oil.

AHD Energy Drench will also help activate the ewe's metabolism which in turn stimulates her appetite during the critical periods leading up to lambing or during any stress related period (long periods in yards for example).

The loss of appetite is common under stress which leads to sleepy sickness and then onto milk fever or the other way around.

AHD Energy Drench's ingredients will also deliver an "energy boost" which helps a ewe through this critical period by keeping her on her feet and actively feeding, which in turn , keeps the body temperature up and metabolism functions as normal as possible under this stress period. Total energy 13Mj ME/L

AHD Energy Drench also delivers a level of calcium that is effective in reducing the incidence of milk fever.

### DOSAGE

- AHD Energy Drench remains free flowing under all conditions and is therefore suitable to be dosed through a drench gun. A unique quality of AHD Energy Drench
- Ensure the ewes head is held firmly, drench 100 ml of AHD Energy Drench over the back of the tongue (AHD Energy Drench is drenched the same way as you would drench with an anthelmintic) allowing the ewe to swallow as the does is delivered.
- AHD Energy Drench is very palatable also making it easier to drench.
- It is recommended that the container is shaken prior to use.
- AHD Energy Drench is also suitable for younger stock under feed stress conditions and will help them convert feed intake better during times of feed changes or stress. Does rate for hogget's and lambs is 30 mls.
- Calves 100 mls

With the prolonged drought conditions in the North Island, feed shortages are going to place a number of stress related problems on livestock
