

ACTIVE<sup>+</sup>

# DELGUARD

## POUR-ON DRENCH

For the prevention of nuisance fly and control of biting and sucking lice.

ACTIVE +1

DELTAMETHRIN

Active Ingredient: 15g/L Deltamethrin.

USE ON:  
CATTLE

PREVENTION & CONTROL OF:  
NUISANCE FLY & SUCKING LICE

# DELGUARD

## POUR-ON DRENCH

Active Ingredient: 15g/L Deltamethrin.

### BENEFITS

- Nil milk withholding period.
- Control of biting and sucking lice.
- Up to four weeks protection against nuisance fly.
- Very competitive cost per dose.
- Developed in New Zealand for New Zealand.

### ADMINISTRATION

Apply using a suitable T-Bar Gun. Must be applied in a wide (5 to 10cm) continuous strip from between the ears to the tail, down the midline, to ensure even dispersion of product down both sides of the animal.

Dose according to the heaviest animal, see below dose rate table. Clean equipment thoroughly after use.

CATTLE		
DOSE RATE: Lice and Nuisance Fly - 1mL per 20kg.		
LIVEWEIGHT	DOSE	DOSES PER 5L PACK
Up to 100kg	5mL	1000
101 to 200kg	10mL	500
201 to 300kg	15mL	333
301 to 400kg	20mL	250
401 to 500kg	25mL	200
501 to 600kg	30mL	166
Cattle over 600kg	5 mL/100kg liveweight	

### WITHHOLDING PERIODS

MEAT: Cattle producing meat or offal for human consumption must not be sold for slaughter either during or within 28 days of the last treatment.

MILK: Nil.

BOBBY CALVES: No withholding period is required prior to slaughter for calves born to cows treated in late pregnancy and then allowed to suckle those cows.

### PRECAUTIONS

In rare cases some cows are irritated by synthetic pyrethroids for 48 to 72 hours after application. This tends to be on a herd basis and repeatable so do not use on cows previously known to be irritated by synthetic pyrethroids.

### EFFICACY

Active+ Delguard Pour On is a water based synthetic pyrethroid insecticide for control of biting and sucking lice (*Bovicola bovis*, *Linognathus vituli*, *Haematopinus eurysternus* and *Solenopotes capillatus*) on cattle of any age.

It also controls nuisance fly (*Stomoxys calcitrans*) for a period of up to four weeks. The period of protection Active+ Delguard Pour On will achieve is influenced by a number of factors such as the level of fly challenge, environmental and management factors. Therefore it is imperative that Active+ Delguard Pour On is considered part of an overall nuisance fly management plan.

Maximum lice kill is achieved up to six weeks after application, though relief of symptoms is rapid. DO NOT apply Active+ Delguard Pour On to wet cattle. Do not use if rainfall is pending.

**Active+ Delguard Pour On is a non-systemic. It controls lice by dispersing externally around the body of the animal; therefore accurate application is critical.**

### STORAGE

Store at or below 25°C, avoid temperatures below 0°C and above 35°C. Protect from light.

### PACK SIZES

Active+ Delguard Pour-On is available in 5L packs.

Active+ Delguard Pour-On is registered pursuant to the ACVM Act 1997 No. A011640.
