

A.I.TAGS™

Bovine Heat Detection

The industry leading rub-off heat detection system

"A.I. TAGS are the only Peel 'n Stick tag in the world that records true mounting activity, they do not record anything other than that."

Why do all other tags fail to do that?

1. All other tags "Scratch Off" by nearly everything that comes in contact with them, certainly not only true mounting activity.
2. A.I. TAGS are not screen printed like all other tags, they are trade secret protected and, by a completely different process, A.I. TAGS are the only "Rub Off" tag in the world that will only show the underlying color when being mounted by another animal. A.I. TAGS are also the only 2 colour tag in the world.

I encourage you to try scratching A.I. TAGS off with a coin or a tree branch and try the same on your current tag, this will prove the above claims.

Producers using A.I. TAGS use less semen and have higher pregnancy rates. An additional advantage using A.I. TAGS is that our customers are electing to use a higher quality, more expensive semen because our tags are so accurate.

A.I. TAGS™
Bovine Heat Detection

The Industry Leading Rub-Off Heat Detection System

Convenient.
Accurate.
Reliable.

50 UNITS
NET WT. 3.3 OZ.

The Gold Standard of Heat Detection

ACCURATE
A.I. TAGS™ use a unique Rub-Off technology that won't scratch off - resulting in no false positive readings.

CONVENIENT
No external glues or messy chalk to deal with. Simply peel off the A.I. TAGS Detector and apply!

RELIABLE
Our strong adhesive will ensure the detector stays in place - long after standing heat has passed. No retention issues and no curling.

AVOID COSTLY TIMING ISSUES
A.I. TAGS Rub-Off Heat Detectors will turn white under excessive mounting conditions indicating that an animal is leaving standing heat and should be observed more closely.

CHECK FOR ANIMAL REHEAT OR HERD SEGMENTATION
A.I. TAGS are available in four convenient, bright colors.
