

# AHD LTD CREDENCE DISINFECTANT

## FOR CALF PEN HYGIENE

### PRODUCT INFORMATION

#### *Don't Risk Losing Calves to Cryptosporidium This Season!*

Cryptosporidium spreads through tough protective oocysts that can survive for long periods in calf-rearing environments. Unlike bacteria and viruses, these hardy parasites are protected by a thick outer wall (oocysts), making them difficult to eliminate with many standard disinfectants.

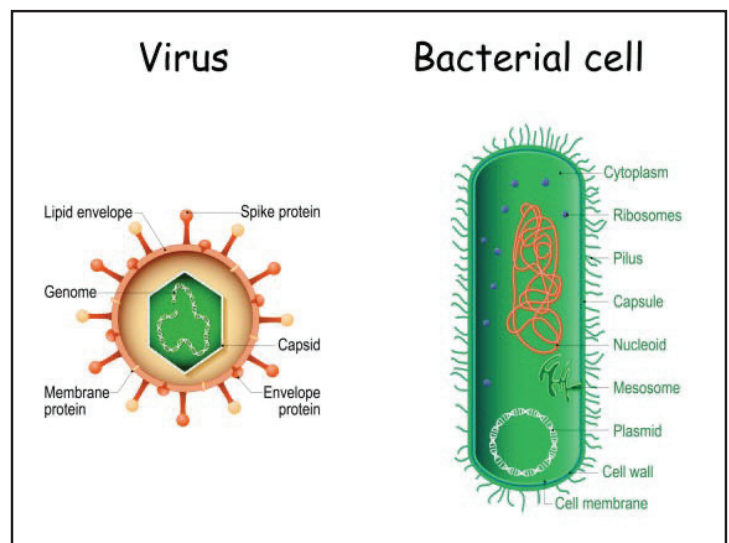

Treat your calf pens with Credence – the disinfectant proven to penetrate the cell wall (oocyst) and help reduce environmental contamination.

#### **Application Instructions:**

- Dissolve 1 Credence tablet in 10L of water
- Spray calf pens thoroughly until run-off is visible
- Leave to air dry
- Ideal for use between calf batches and as part of your calf health management programme

#### **Why Choose Credence?**

- Proven to penetrate oocysts
- High safety profile
- Non-corrosive
- Easy to apply
