This advice is for clearance under the ACVM Act only. Additional assessment under the Biosecurity Act and/or HSNO Act is required for some products. See “imported products” below.

Dear Lucy,

ACVM CLASS DETERMINATION ADVICE

Credence Stock Wash

The Agricultural Compounds and Veterinary Medicines team has completed a class determination for the above named products based on the information provided by the applicant.

Determination

This product is not defined as an agricultural compound under the Agricultural Compound and Veterinary Medicines (ACVM) Act 1997.

This product does not require registration under the ACVM Act to be imported, marketed, distributed, sold or used in New Zealand.

Rationale

This product is intended for use as a sanitising animal wash prior to slaughter. The intended purpose is to control human health pathogens (i.e. food safety) and not for the management of the animal. Therefore, the product does not meet the definition of an agricultural compound under the ACVM Act.

Advice

This class determination becomes **invalid** if:

1. This product is changed in any way.
2. This product is advertised using information different from that provided in the process of this class determination.

For further information regarding the interpretation of the Regulations, see ‘Products Regulated under the ACVM Act’ on our website at <https://www.mpi.govt.nz/dmsdocument/2979-products-regulated-under-the-acvm-act>

For imported products:

1. This class determination letter (or copy) must be presented to Biosecurity New Zealand at the border for the product to be released under the ACVM Act. To avoid delays with clearance and ACVM inspection costs, include a copy of this letter with the declaration information attached to the product.
2. Products made from ingredients of biological (plant, animal, or microorganism) origin must also meet requirements under the Biosecurity Act 1993. See <https://www.mpi.govt.nz/importing/> or contact animal.imports@mpi.govt.nz or plantimports@mpi.govt.nz
3. Products containing a live organism and/or a hazardous substance must also meet requirements under the Hazardous Substances and New Organisms (HSNO) Act 1996. See www.epa.govt.nz
